

## **Ready to see your future smile?**

Hi, I just wanted to let you know about a free app you might be interested in trying out on your phone...

It allows you to see what you'd look like with whiter, straighter and healthier looking teeth!

We call it the "smile simulator" app, because it allows you to "try out" a smile makeover and see the results, before you have the work done.

All you have to do is install the free app on your phone, take a selfie, then see the before and after photographs of your future smile, so you know whether certain types of cosmetic work will suit you.

It's a lot of fun :)

You can also use the app to share the results with friends and family.

Anyway, we thought it would be a fun way to see what a new smile would look like for you, before any work is carried out.

You can download the free smile simulator app here:

We hope you have as much fun with this as we did!

## **Here's a new app that allows you to "try on" a new smile...**

Wondering if bright white teeth would suit you? Will those dental veneers be too big or too small for your face? Will you really look better without that front gap in your teeth?

Then here's a new app that allows you to "try on" a new smile to see what you'll look like.

It's a great little app which means you don't have to guess what your new teeth will look like. Instead, you can see for yourself, before you decide whether to have any kind of treatment or not.

All you have to do is download the smile simulator app (which is free), then take a quick smiling selfie and the app will automatically send you a new image with your new smile. Very clever stuff!

It's a great way to feel confident about procedures and explore different options before committing to anything.

It's also good fun showing your new smile to friends and family on social media for a second opinion!

Download the free app here: [\[LINK\]](#)
